

How to do a peel- *in pictures*

- x Find the peeling strop- hold on to it for dear life!
- x Clip one end of the peeling strop onto the old kite and the other onto the ring of the sheet (not the snappy bit).
- x Then spike the sheet off the old kite and hopefully it will look like this:

- x Attach the new kite corner to the spiked sheet, making sure that it is foreword of the forestay. Attach the head to the halyard and the other corner to the guy that you have taken off the old kite.
- x Hoist!

x Then when ready spike the peeling stop

Here

x Gather in and drop old kite, take off the sheet from the old kite and put it on the new, carefully remove peeling stop and...
Ta da!

More speed!
